

Targeting Higher Credit Card Payments

Benedict Guttman-Kenney

Rice University

19th International Behavioural Finance Conference, 30th October 2025

Motivation

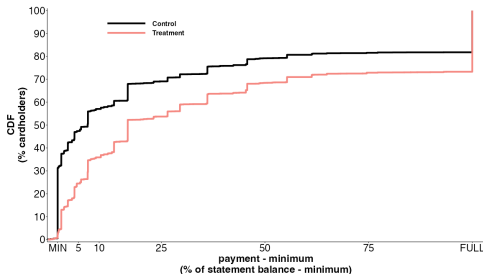

Research across the fields of economics, finance, management, marketing, and psychology documents the importance of “credit card anchoring” (Thaler & Sunstein, 2008; Stewart, 2009)

- Low credit card payments in administrative data, where minimum payment amount is salient, attributed to anchoring (Keys & Wang, 2019; Medina, & Negrin, 2022)

Motivation

Research across the fields of economics, finance, management, marketing, and psychology documents the importance of “credit card anchoring” (Thaler & Sunstein, 2008; Stewart, 2009)

- Low credit card payments in administrative data, where minimum payment amount is salient, attributed to anchoring (Keys & Wang, 2019; Medina, & Negrin, 2022)
- Shrouding minimum payment amount $\uparrow$ hypothetical credit card payments (Stewart, 2009)

$\uparrow$ 12 p.p. (Guttman-Kenney, 2024)

Motivation

Research across the fields of economics, finance, management, marketing, and psychology documents the importance of “credit card anchoring” (Thaler & Sunstein, 2008; Stewart, 2009)

- Low credit card payments in administrative data, where minimum payment amount is salient, attributed to anchoring (Keys & Wang, 2019; Medina, & Negrin, 2022)
- Shrouding minimum payment amount $\uparrow$ hypothetical credit card payments (Stewart, 2009)
- Result replicated across many online experiments (Navarro-Martinez et al., 2011; Jiang & Dunn, 2013; Salisbury, 2014; McHugh & Ranyard, 2016; Salisbury & Zhao, 2020; Guttman-Kenney et al., 2018; Hendy et al., 2021; Sakaguchi et al., 2022; Ortiz et al., 2024)

Motivation

Research across the fields of economics, finance, management, marketing, and psychology documents the importance of “credit card anchoring” (Thaler & Sunstein, 2008; Stewart, 2009)

- Low credit card payments in administrative data, where minimum payment amount is salient, attributed to anchoring (Keys & Wang, 2019; Medina, & Negrin, 2022)
- Shrouding minimum payment amount $\uparrow$ hypothetical credit card payments (Stewart, 2009)
- Result replicated across many online experiments
(Navarro-Martinez et al., 2011; Jiang & Dunn, 2013; Salisbury, 2014; McHugh & Ranyard, 2016; Salisbury & Zhao, 2020; Guttman-Kenney et al., 2018; Hendy et al., 2021; Sakaguchi et al., 2022; Ortiz et al., 2024)
- ...but does this finding extrapolate to the field?

Field experiment on 6,714 credit cardholders with a U.S. FinTech

- Vary payment options in their app
- Test shrouding minimum payment amount
- Test adding 50% payment amount option
- Observe outcomes for six cycles

Field experiment on 6,714 credit cardholders with a U.S. FinTech

- Vary payment options in their app
- Test shrouding minimum payment amount
- Test adding 50% payment amount option
- Observe outcomes for six cycles

Key Findings: Results of hypothetical online experiments do not translate into the field

- No increase in payments from shrouding the minimum payment
- Adding 50% payment option does not increase payments
- Minimum payment amount is (relevant) target **not** (irrelevant) anchor

Contributions

- Evidence that a **policy** proposed by the Financial Conduct Authority would be ineffective

- Evidence that a **policy** proposed by the Financial Conduct Authority would be ineffective
- **Household Finance:**
 - Credit card debt *not* driven by anchoring to the minimum payment
 - Reinterpret prior results. Consumers target minimum payment amount
(Agarwal et al., 2015; Keys & Wang, 2019; Seira et al., 2017; Adams et al., 2022; Medina & Negrin, 2022; Bartels et al., 2024; Guttman-Kenney et al., 2025; Herzog et al., 2025)

- Evidence that a **policy** proposed by the Financial Conduct Authority would be ineffective
- **Household Finance:**
 - Credit card debt *not* driven by anchoring to the minimum payment
 - Reinterpret prior results. Consumers target minimum payment amount
(Agarwal et al., 2015; Keys & Wang, 2019; Seira et al., 2017; Adams et al., 2022; Medina & Negrin, 2022; Bartels et al., 2024; Guttman-Kenney et al., 2025; Herzog et al., 2025)
- **Behavioral Economics/Finance:**
 - Limits of nudging and active choice (Carroll et al., 2009; Keller et al., 2011; Beshears & Kosowsky, 2020; DellaVigna & Linos, 2022; Laibson, 2020; Campbell & Ramadorai, 2025)
 - How consumers act under multiple reference points (O'Donoghue & Sprenger, 2018)

- Evidence that a **policy** proposed by the Financial Conduct Authority would be ineffective
- **Household Finance:**
 - Credit card debt *not* driven by anchoring to the minimum payment
 - Reinterpret prior results. Consumers target minimum payment amount
(Agarwal et al., 2015; Keys & Wang, 2019; Seira et al., 2017; Adams et al., 2022; Medina & Negrin, 2022; Bartels et al., 2024; Guttman-Kenney et al., 2025; Herzog et al., 2025)
- **Behavioral Economics/Finance:**
 - Limits of nudging and active choice (Carroll et al., 2009; Keller et al., 2011; Beshears & Kosowsky, 2020; DellaVigna & Linos, 2022; Laibson, 2020; Campbell & Ramadorai, 2025)
 - How consumers act under multiple reference points (O'Donoghue & Sprenger, 2018)
- **Empirical methods** in social sciences:
 - Online studies not translating into the field (Gandhi et al., 2025)
 - Scaling-up issues (List, 2022)

1. The Experiment
2. Experimental Results
3. Anchoring and Targeting

The Experiment

Field Experiment Design

- **Control (C)**, 4,542 consumers:
minimum payment, 50% statement balance, statement balance, current balance, text box

Field Experiment Design

- **Control (C)**, 4,542 consumers:
minimum payment, 50% statement balance, statement balance, current balance, text box
- **Treatment 1 (T1)**, 1,096 consumers:
~~minimum payment~~, 50% statement balance, statement balance, current balance, text box

Field Experiment Design

- **Control (C)**, 4,542 consumers:
minimum payment, 50% statement balance, statement balance, current balance, text box
- **Treatment 1 (T1)**, 1,096 consumers:
~~minimum payment~~, 50% statement balance, statement balance, current balance, text box
- **Treatment 2 (T2)**, 1,076 consumers:
~~minimum payment, 50% statement balance~~, statement balance, current balance, text box

Field Experiment Design

- **Control (C)**, 4,542 consumers:
minimum payment, 50% statement balance, statement balance, current balance, text box
- **Treatment 1 (T1)**, 1,096 consumers:
~~minimum payment~~, 50% statement balance, statement balance, current balance, text box
- **Treatment 2 (T2)**, 1,076 consumers:
~~minimum payment~~, ~~50% statement balance~~, statement balance, current balance, text box

In C, T1, & T2, if attempt to pay $<$ minimum, a **prompt** appears with minimum payment

Field Experiment Design

- **Control (C)**, 4,542 consumers:
minimum payment, 50% statement balance, statement balance, current balance, text box
- **Treatment 1 (T1)**, 1,096 consumers:
~~minimum payment~~, 50% statement balance, statement balance, current balance, text box
- **Treatment 2 (T2)**, 1,076 consumers:
~~minimum payment~~, ~~50% statement balance~~, statement balance, current balance, text box

In C, T1, & T2, if attempt to pay $<$ minimum, a **prompt** appears with minimum payment

T1 (vs C):

Effect of *shrouding* minimum payment option

T2 (vs C):

Effect of *shrouding* minimum payment and 50% statement balance options

Field Experiment Design

- **Control (C)**, 4,542 consumers:
minimum payment, 50% statement balance, statement balance, current balance, text box
- **Treatment 1 (T1)**, 1,096 consumers:
~~minimum payment~~, 50% statement balance, statement balance, current balance, text box
- **Treatment 2 (T2)**, 1,076 consumers:
~~minimum payment~~, ~~50% statement balance~~, statement balance, current balance, text box

In C, T1, & T2, if attempt to pay $<$ minimum, a **prompt** appears with minimum payment

T1 (vs C):

Effect of *shrouding* minimum payment option

T2 (vs C):

Effect of *shrouding* minimum payment and 50% statement balance options

T1 (vs T2):

Effect of *adding* 50% statement balance option

Data from U.S. FinTech lender providing credit cards:

- Means: \$280 credit limits, \$200 statement balance, 570 VantageScore.

Today, focus on regression results from this specification:

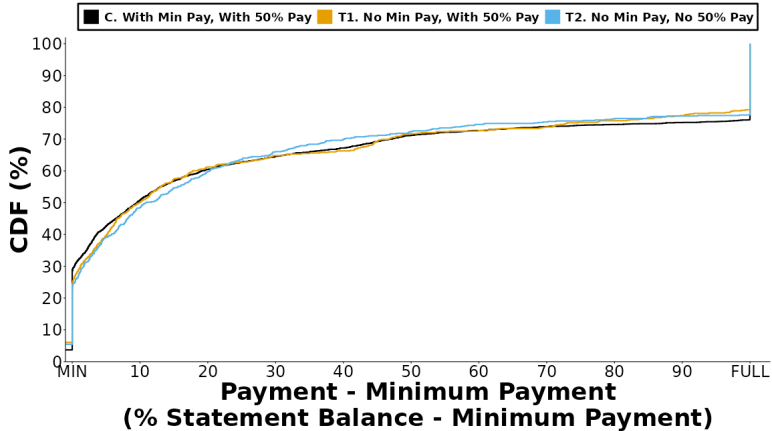

$$Y_{i,t} = \sum_{\tau} \left[\delta_{\tau}^{T1(vsC)} (D_{\tau} \times T1_i) + \delta_{\tau}^{T2(vsC)} (D_{\tau} \times T2_i) \right] + X_i' \beta + \mu_t + \varepsilon_{i,t} \quad (1)$$

X_i is vector of pre-experiment controls, μ_t statement cycle fixed effects

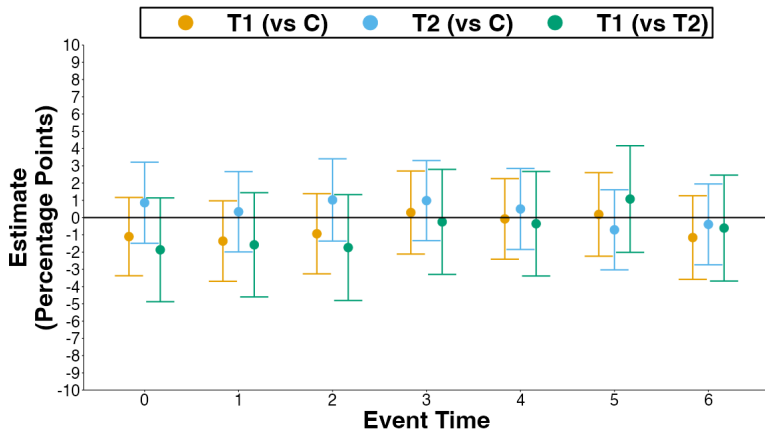

Standard errors clustered at consumer-level

Experimental Results

Effects On Payment Distribution

Effects On Payments (% Statement Balance)

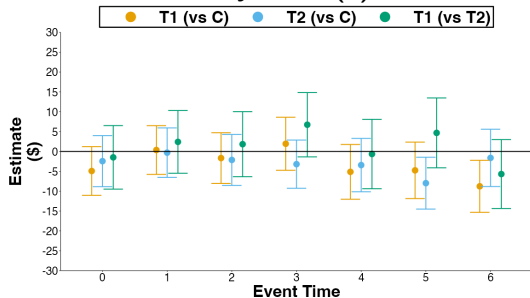

T1 (vs C): -1.21 (s.e. 1.24) **T2 (vs C):** -0.44 (s.e. 1.20) **T1 (vs T2):** -0.61 (s.e. 1.57)

(δ_6^k , percentage points)

Robust To Measuring Payments (\$), Revolving Debt (\$)

A. Payments (\$)

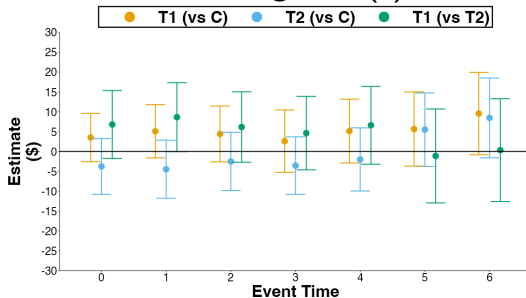

T1 (vs C): -\$8.92 (s.e. \$3.33)

T2 (vs C): -\$1.68 (s.e. \$3.68)

T1 (vs T2): -\$5.75 (s.e. \$4.42)

B. Revolving Debt (\$)

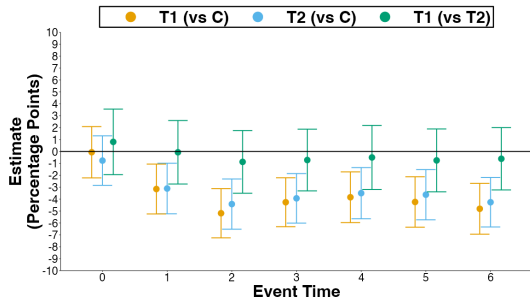

T1 (vs C): \$9.79 (s.e. \$5.30)

T2 (vs C): \$8.52 (s.e. \$5.14)

T1 (vs T2): \$0.47 (s.e. \$6.62)

Effects On Payment Distribution: Paying Minimum

A. Pay Minimum (%)

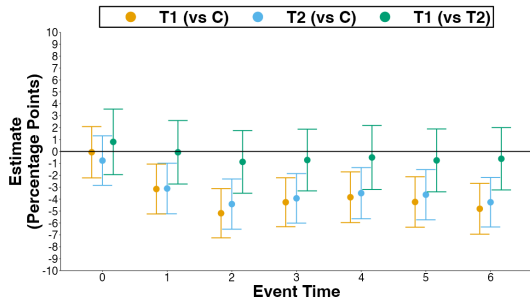

T1 (vs C): -4.78^{***} (s.e. 1.09)

T2 (vs C): -4.24^{***} (s.e. 1.06)

T1 (vs T2): -0.61 (s.e. 1.33)

Effects On Payment Distribution: Paying Minimum

A. Pay Minimum (%)

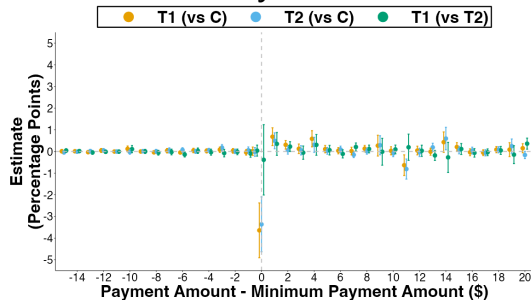

T1 (vs C): -4.78^{***} (s.e. 1.09)

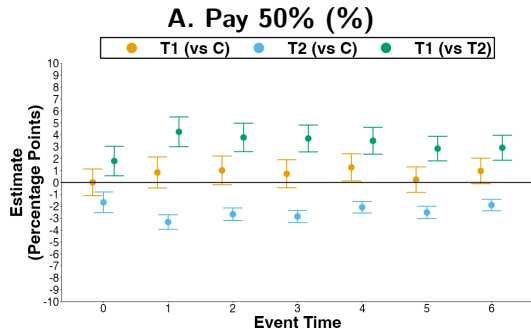

T2 (vs C): -4.24^{***} (s.e. 1.06)

T1 (vs T2): -0.61 (s.e. 1.33)

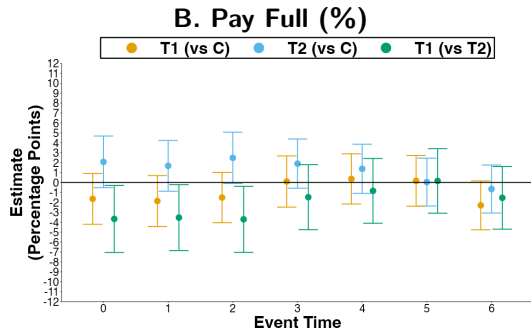

B. Payments Proximate To Minimum Payment Amount

Effects On Paying 50% and Full Balance

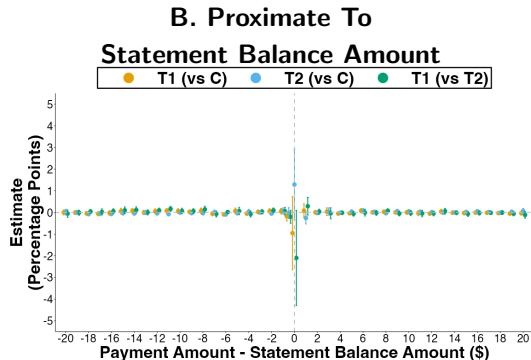

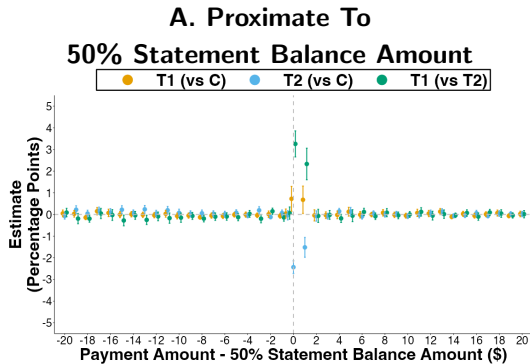

T1 (vs C): 0.81 (s.e. 0.81)
T2 (vs C): -2.65*** (s.e. 0.38)
T1 (vs T2): 3.64*** (s.e. 0.84)

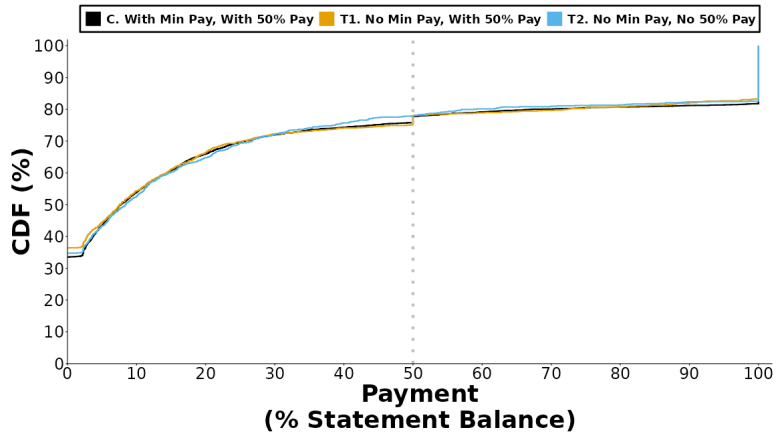

T1 (vs C): -3.70 (s.e. 1.62)
T2 (vs C): -1.49 (s.e. 1.59)
T1 (vs T2): -2.67 (s.e. 2.09)

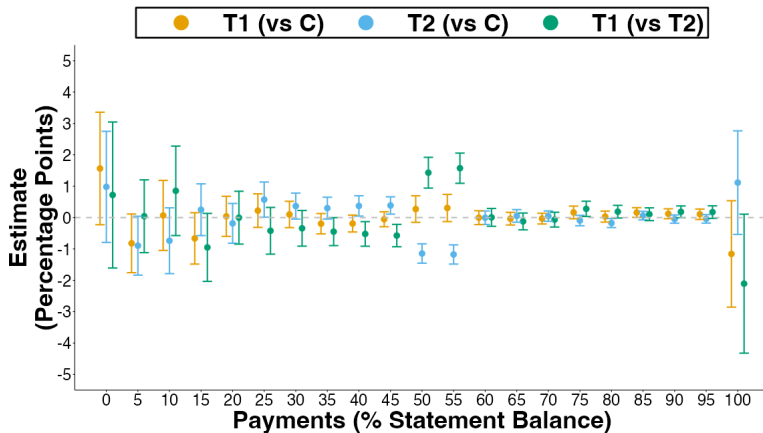

Effects On Payments Proximate To 50% and Statement Balance Amounts

Effects On Payment Distribution

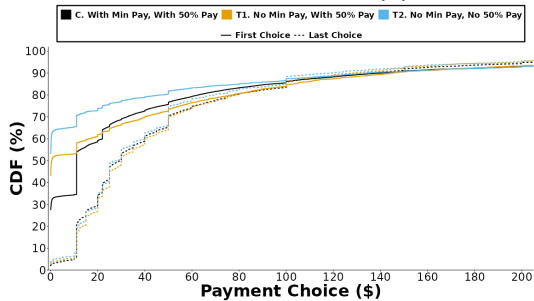

Effects On Payment Distribution

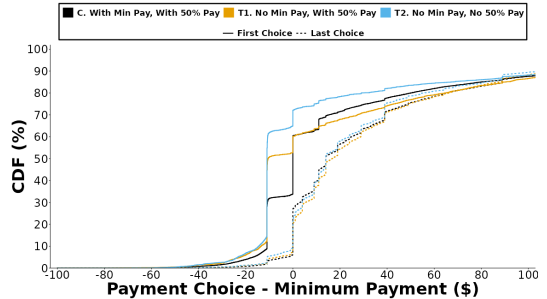

Adding 50% option: Shifts from $35\% \leq x < 45\%$ (& possibly 100%) to $45\% \leq x < 55\%$

Initial vs. Last Payment Choices Within Payment Cycle

A. Payment Choice (\$)

B. Payment Choice - Minimum Payment

Anchoring and Targeting

Distinguishing Anchoring from Targeting

Anchors: Irrelevant numbers influence choices e.g., thinking of your (randomly-assigned) last two digits of SSN influences choices (Tversky & Kahneman, 1974; Ariely et al., 2003)

Targets (Reference-dependent preferences): Consumers exert effort to meet/exceed relevant numbers e.g., marathon time goals (Heath, Larrick, & Wu, 1999; Allen et al., 2017)

Distinguishing Anchoring from Targeting

Anchors: Irrelevant numbers influence choices e.g., thinking of your (randomly-assigned) last two digits of SSN influences choices (Tversky & Kahneman, 1974; Ariely et al., 2003)

Targets (Reference-dependent preferences): Consumers exert effort to meet/exceed relevant numbers e.g., marathon time goals (Heath, Larrick, & Wu, 1999; Allen et al., 2017)

Distinguish by applying “VPA” Visual Proximity Analysis (Bartels, Herzog, & Sussman, 2024)

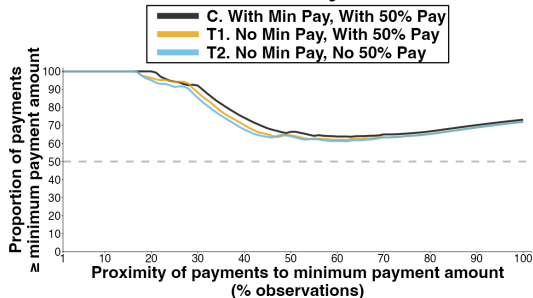

$$Y_i = \alpha + \beta^{T1} T1_i + \beta^{T2} T2_i + \gamma Proximity_i + \theta^{T1} (Proximity_i \times T1) + \theta^{T2} (Proximity_i \times T2) + \varepsilon_i$$

Anchoring: $\alpha \approx 50\%$, $\gamma > 0$ if low anchor, $\gamma < 0$ if high anchor, $\beta^{T1}, \beta^{T2}, \theta^{T1}, \theta^{T2} \neq 0$

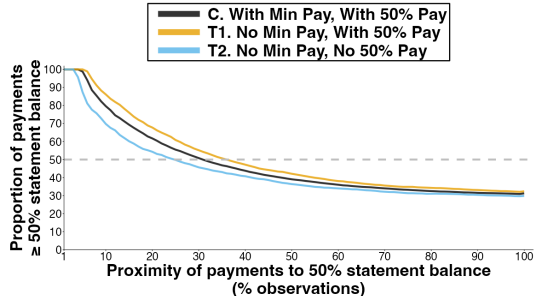

Targeting: $\alpha \approx 100\%$, $\gamma < 0$, $\beta^{T1}, \beta^{T2}, \theta^{T1}, \theta^{T2} = 0$

Visual Proximity Analysis (VPA): Payments Proximate To Focal Amounts

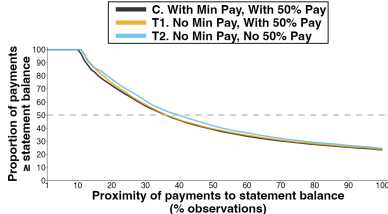

A. Minimum Payment

B. 50% Statement Balance

C. Statement Balance

Distinguishing Anchoring from Targeting

	Minimum Payment	50% Statement Balance	Statement Balance
	(1)	(2)	(3)
Intercept	98.498 (1.412)	76.835 (2.718)	88.803 (2.323)
T1	-1.431 (2.123)	5.289 (3.645)	1.368 (3.269)
T2	-2.819 (2.211)	-7.571 (3.986)	3.229 (3.079)
Proximity	-0.406 (0.028)	-0.585 (0.042)	-0.796 (0.038)
Proximity x T1	-0.005 (0.041)	-0.044 (0.057)	-0.012 (0.053)
Proximity x T2	0.008 (0.042)	0.078 (0.062)	-0.015 (0.050)
Observations	300	300	300
Adjusted R ²	0.647	0.773	0.871

Conclusions

Results of online experiments do not translate into the field

- No increase in payments from shrouding the minimum payment
- Adding 50% payment option does not increase payments
- Minimum payment amount is (relevant) target **not** (irrelevant) anchor

Conclusions

Results of online experiments do not translate into the field

- No increase in payments from shrouding the minimum payment
- Adding 50% payment option does not increase payments
- Minimum payment amount is (relevant) target **not** (irrelevant) anchor

Next Steps

- Instead of choosing multiples of minimum, do consumers choose small round numbers?
- **Liquidity Constraints:** liquid cash measured via linked checking account data
(Guttman-Kenney, Adams, Hunt, Laibson, Stewart, & Leary, 2025)
- **Heterogeneity:** behavioral vs. non-behavioral consumers
(List, Rodemeier, Roy, & Sun, 2024; Allcott, Cohen, Morrison, & Taubinsky, 2025; Choukhmane & Palmer, 2025)
